PROFESSIONAL SUMMARY

Developer with 2+ years of combined freelance, internship, and project experience: game development with Unity since 2023, and full-stack web development (Next.js, Node.js, TypeScript, PostgreSQL). Interned on a multi-vendor delivery platform, built the doctor-facing dashboard for an Alzheimer's care platform as a final-year project, and am growing into Shopify theme development. Looking for full-time Full-Stack, Software Engineering, or Shopify Developer roles.

PROJECTS

NeuroHaven | Early-Stage Alzheimer's Care Platform

Next.js | TypeScript | Tailwind CSS | Supabase

- Built the Doctor Dashboard for a team-built caregiving and monitoring platform: the web bridge between the Flutter patient app and clinicians, integrated with a Python backend (Uvicorn + ngrok).
- Engineered real-time doctor-patient chat, calling, and a distress-alert system, plus a cognitive scoring engine (streak-adjusted 0–100 scale) with four color-coded risk tiers, weekly adherence grids, and live behavioral trend graphs.
- Built the Admin panel (support tickets, one-to-many doctor-patient assignment with reassignment) and added chat export to CSV/TXT for clinical record-keeping.

Shopify Theme Development | Training & Practice Projects

Liquid | JavaScript | Shopify CLI | Dawn

- Completed an advanced Shopify theme development course (Liquid, sections/blocks, metafields and metaobjects, Cart API, Section Rendering API, web components) and built a custom theme from scratch: homepage, product page, cart drawer, collection page, and mega menu.
- Built a linked-products swatch selector that connects separate products through a product-list metafield and swaps the product template (media, title, price, details) without a page reload using the Section Rendering API.
- Built a two-tier free-gift cart drawer with progress bar and savings line; gift products and thresholds are configurable in the theme editor.
- Recreated the Voluspa product page template in Dawn, including a custom editor-driven related-products section matching the original layout.

CogDrift | Clinician-Gated Anomaly-Monitoring Engine (open source)

FastAPI | React | PostgreSQL | scikit-learn

- Built and deployed (Vercel, Docker/Back4App, Neon Postgres) a standalone service that flags unusual patterns in cognitive-game scores with a rolling z-score trend detector and a per-patient Isolation Forest, routing flags to a clinician review queue before any caregiver message.
- Implemented JWT-based RBAC with endpoint-enforced caregiver scoping and a server-side guardrail blocking medication/dosage instructions; evaluated on synthetic data with documented limitations.

Additional Projects

React.js | Node.js | Express | MongoDB

- Learning Management System:** multi-role platform (Admin, Instructor, Student) with course enrollment, assignment progression tracking, and user management.
- TypingSprint:** typing practice app with live WPM/accuracy metrics and a persistent MongoDB leaderboard via REST endpoints.

WORK EXPERIENCE

Independent Full-Stack (MERN) Developer | Self-employed, Remote

March 2025 – Present

- Built full-stack web applications with React, Next.js, Node.js, Express.js, MongoDB, and TypeScript, taking on tasks from project owners through professional networks and developer communities.
- Implemented REST APIs, authentication, CRUD systems, database integrations, and responsive frontend features.
- Debugged existing applications, shipped new functionality, and adapted solutions to changing project requirements.

Software Engineer Intern | Axiolink Systems

April 2026 – June 2026

- Built Next.js API endpoints and backend logic for a multi-vendor delivery platform, using PostgreSQL + PostGIS and H3 hexagonal indexing for location-based matching.
- Developed RESTful APIs with Node.js and Express and worked with Prisma ORM and PostgreSQL for database operations.
- Built real-time rider tracking with Socket.IO and Redis GEOSEARCH, and integrated OSRM for route mapping and delivery-distance calculations.
- Implemented Cloudinary-based image management for product and vendor listings; built dashboard interfaces for the Admin and Buyer consoles.

Freelance Game Developer (Unity) | Fiverr, Remote

September 2023 – June 2025

- Developed 2D and 3D game mechanics in C# with Unity, turning client concepts into playable prototypes and final builds.
- Scripted interactive UI (menus, HUDs, inventory systems) to improve player navigation.

EDUCATION

Bachelor of Computer Science (BS CS) – University of Management & Technology, Lahore

Graduated 2026

SKILLS

Frontend: JavaScript (ES6+), TypeScript, React.js, Next.js, Redux Toolkit, Tailwind CSS, HTML5, CSS3

Backend & Databases: Node.js, Express.js, REST APIs, MongoDB, PostgreSQL (PostGIS), Prisma, Redis, Supabase, Socket.IO

Shopify: Liquid, JSON Templates (OS 2.0), Sections & Blocks, Metafields & Metaobjects, Cart API, Section Rendering API, Web Components, Shopify CLI

Tools & Other: Git, GitHub, VS Code, Postman, Figma, Jira, Trello, Netlify/Vercel, OSRM, H3, Cloudinary, Agile/Scrum, Unity (C#)
