PROFESSIONAL SUMMARY

Shopify theme developer with 12 months of on-site client work at Ecomm (Liquid, JavaScript, mega menus, pub/sub theme events), an advanced theme-development course, and recent practice builds with the Cart and Section Rendering APIs. Backed by a year of professional React and Node.js work at Metadots and a backend internship at Axiolink Systems. Looking for full-time Shopify Theme Developer roles.

SHOPIFY EXPERIENCE

Shopify Theme Developer | Ecomm (Contract, On-site)

February 2024 – January 2025

- Developed and customized Shopify themes with Liquid, JavaScript, HTML, and CSS for client projects, working across multiple theme formats.
- Implemented theme features including mega menus and pub/sub event configuration for communication between theme components.
- Built simple frontend web apps within Shopify storefronts.
- Worked on-site on project and client deliverables.

SHOPIFY PROJECTS (TRAINING & PRACTICE)

- Completed an advanced Shopify theme course (Liquid, sections/blocks, metafields and metaobjects, Cart API, Section Rendering API, web components) and built a custom theme from scratch: homepage, product page, cart drawer, collection page, mega menu.
- Linked-products swatch selector: connects separate products through a product-list metafield and swaps the product template (media, title, price, details) without a page reload using the Section Rendering API.
- Two-tier free-gift cart drawer: progress bar, savings line, automatic add/remove with loading states; merchants choose gift products and thresholds from the theme editor, backed by Buy X Get Y automatic discounts.
- Voluspa product page recreation in Dawn, including a custom editor-driven related-products section matching the original layout.

ADDITIONAL ENGINEERING EXPERIENCE

MERN Stack Engineer | Metadots (Full-time, Remote)

March 2025 – March 2026

- Built frontend features in React, implementing component state logic and responsive, CSS-based layouts for web applications.
- Developed backend functionality with Node.js and Express, handled MongoDB operations including transactions, and fixed bugs across the stack.

Backend Developer Intern | Axiolink Systems

April 2026 – July 2026

- Built Next.js API endpoints and Node.js/Express REST APIs (Prisma, PostgreSQL + PostGIS) for a multi-vendor delivery platform, plus real-time rider tracking with Socket.IO and Redis.

NeuroHaven (final-year team project) | Next.js | TypeScript | Supabase

- Built the doctor dashboard and admin panel: real-time chat and calling, distress alerts, a cognitive scoring engine with four risk tiers, and live trend graphs.

EDUCATION

BS Computer Science | University of Management & Technology, Lahore

Nov 2022 – Aug 2026
