

MUHAMMAD NAQI HAIDER

Full-Stack (MERN) Developer

Lahore, Pakistan | +92 3091010431 | naqi073@gmail.com

[LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Full-stack developer with 2+ years of professional experience across a MERN stack role at Metadots, a backend internship at Axiolink Systems, and an on-site Shopify theme role. Works with React, Next.js, Node.js, TypeScript, MongoDB, and PostgreSQL, and built the doctor-facing dashboard of an Alzheimer's care platform as a final-year project. Looking for full-time Full-Stack or MERN roles.

WORK EXPERIENCE

MERN Stack Engineer | Metadots (Full-time, Remote)

March 2025 – March 2026

- Built and maintained full-stack features for a SaaS platform across React, Node/Express, and MongoDB, owning work from schema design to API to UI.
- Diagnosed slow API endpoints using query profiling (`explain()`), then added indexes and pagination, cutting response times from 2.5s to 700ms.
- Reduced unnecessary React re-renders with memoization (`useMemo`, `useCallback`, `React.memo`) and lazy loading, improving page load time by 20-30%.
- Integrated Cloudinary/S3 for secure file uploads with type and size validation, moving media off the application server and reducing page weight through image optimization.
- Implemented MongoDB transactions for multi-step operations, preventing partial writes and keeping data consistent on failures.
- Fixed production bugs across the stack, including state-management issues and UI inconsistencies, improving stability and shortening fix turnaround.
- Built responsive, reusable React components with custom CSS and managed complex state, reducing duplicated code across 6-10 screens.

Shopify Theme Developer | EcomNinja (Contract, On-site)

February 2024 – January 2025

- Developed and customized Shopify themes in Liquid, JavaScript, and CSS for client projects, including mega menus, pub/sub event configuration, and simple frontend web apps.

Backend Developer Intern | Axiolink Systems

April 2026 – July 2026

- Built Next.js API endpoints and backend logic for a multi-vendor delivery platform, using PostgreSQL + PostGIS and H3 hexagonal indexing for location-based matching.
- Developed RESTful APIs with Node.js and Express and worked with Prisma ORM and PostgreSQL for database operations.
- Built real-time rider tracking with Socket.IO and Redis GEOSEARCH, and integrated OSRM for route mapping and delivery-distance calculations.
- Implemented Cloudinary image management for product and vendor listings; built Admin and Buyer console dashboards.

Game Developer (Unity) | Fiverr (Freelance)

September 2023 – June 2025

- Built 2D and 3D game mechanics and interactive UI in C# with Unity, turning client concepts into playable prototypes and final builds.

PROJECTS

NeuroHaven | Early-Stage Alzheimer's Care Platform

Next.js | TypeScript | Tailwind CSS | Supabase

- Built the Doctor Dashboard for a team-built caregiving and monitoring platform: the web bridge between the Flutter patient app and clinicians, integrated with a Python backend (Uvicorn + ngrok).
- Engineered real-time doctor-patient chat, calling, and a distress-alert system, plus a cognitive scoring engine (streak-adjusted 0–100 scale) with four color-coded risk tiers, weekly adherence grids, and live behavioral trend graphs.
- Built the Admin panel (support tickets, one-to-many doctor-patient assignment with reassignment) and added chat export to CSV/TXT for clinical record-keeping.

CogDrift | Clinician-Gated Anomaly-Monitoring Engine (open source)

FastAPI | React | PostgreSQL | scikit-learn

- Built and deployed (Vercel, Docker/Back4App, Neon Postgres) a standalone service that flags unusual patterns in cognitive-game scores with a rolling z-score trend detector and a per-patient Isolation Forest, routing flags to a clinician review queue before any caregiver message.
- Implemented JWT-based RBAC with endpoint-enforced caregiver scoping and a server-side guardrail blocking medication/dosage instructions; evaluated on synthetic data with documented limitations.

EDUCATION

BS Computer Science | University of Management & Technology, Lahore

Nov 2022 – Aug 2026

SKILLS

Frontend: JavaScript (ES6+), TypeScript, React.js, Next.js, Redux Toolkit, Tailwind CSS, HTML5, CSS3

Backend & Databases: Node.js, Express.js, Python, FastAPI, REST APIs, MongoDB, PostgreSQL (PostGIS), Prisma, Redis, Supabase, Socket.IO, scikit-learn

Tools & Other: Git, GitHub, Docker, Postman, Figma, Jira, Netlify/Vercel, OSRM, H3, Cloudinary, Agile/Scrum; Shopify (Liquid, Cart API, Section Rendering API)
